Ihsan Saracgil, Ph.D., is Senior Principal Data Scientist at Visible Alpha, leading the quant research and data science group at the firm. He works on developing new data products and partnering with academic faculty to provide original research for institutional investors. Prior to Visible Alpha, Ihsan was a consultant with expertise on big data in securities trading for broker-dealers and exchanges, across various asset classes. He holds a Ph.D. in Economics from University of Michigan.

# Finding Value in Analyst Estimates for Systematic Value Investors

- Analyst expectations of traditional and new metrics:
  - Book-, earnings-, revenue-to-market
  - Accounting returns:
    - Return on average equity (RoE)
  - Intangibles:
    - (in)tangible book-to-market, PPE-to-market

# Key Results

- Analysts expectations of “RoE” correlate with future stock returns.
  - Long the highest expected RoE stocks and short the lowest RoE stocks every month generates up to **1.03%** monthly alpha with Sharpe ~1.
- Value stocks exhibit significantly lower expected RoE than Growth stocks.
  - Value traps are a drag on returns.
- Best performing long/short strategies incorporate intangible asset values directly.
